

4825 Glenbrook Road Weekly Update for Sept. 19, 2014

This week crews continued with preparations for the tent move activities, making good progress. The site crews finished low probability excavation work this week. During operations a small amount of American University Experiment Station debris and glassware was encountered (see attached).

This weekend a very large crane will arrive in the project area's parking lot at American University, near Watkins Hall. The crane will be used to move the Engineering Control Structure. The crane will need to be built once it arrives on site. This means there will be about 15-20 trucks coming in this weekend to support the crane construction. We anticipate these trucks will be in the vicinity of Nebraska Ave. and Massachusetts Ave. starting at 7 a.m. Sept. 20. We have a plan in place to minimize local traffic impacts during the arrival of the crane. If the crane assembly is not complete on Sept. 20, we will work on Sept. 21 to finish the assembly.

Also, due to the crane assembly process, the site crew will now be parking in a temporary parking area under the tent inside the site. This is only temporary until the crane is assembled.

Safety continues to be our number one priority at the site. Throughout every phase of the project, all necessary precautions are taken to ensure the safety of the site workers, the residents of the community, and those driving by.

To reach a Spring Valley Army Corps representative in the event of an after-hours emergency, please call the project's 24-hour hotline: 1-888-393-0059. During business hours, please continue to call the Spring Valley Community Outreach Team at 410-962-0157.
